

PUBLIC RELEASE / AUGUST 3, 2026

THE HUMAN DOOR

A plain route for people affected by the record, practitioners considering the work, and reviewers testing its claims.

If this work names or affects you

You do not need to understand the whole ecosystem before asking for a correction. Send the smallest useful packet below. The request stays human-readable, and a correction should remain beside the claim it changes.

1 / POINT	The exact page, passage, record, screenshot, or decision you are challenging. Include the URL when possible.
2 / EXPLAIN	What is inaccurate, incomplete, outdated, misleading, or harmful - and why it matters to you.
3 / SUPPORT	A source, document, date, firsthand account, or other evidence that can be checked. Say what must remain private.
4 / REMEDY	The correction, clarification, withdrawal, annotation, or contact you are requesting. You may ask for acknowledgment without public identification.

SEND CORRECTIONS	Contact_Project_Shadow@protonmail.com
PUBLIC LEDGER	therecord.frylock117.chatgpt.site/corrections

This channel is not emergency monitoring and has no hidden response-time promise. If someone faces immediate danger, use an appropriate local emergency or crisis service. This brief is not legal or medical advice and does not guarantee a correction or outcome.

THREE WAYS IN

Choose the door that matches your role.

AFFECTED OR NAMED PERSON	Start with the correction packet on page one. You may challenge a claim, context, omission, source, interpretation, identity link, or remedy. State privacy and safety needs directly.
PRACTITIONER OR ADOPTER	Start at Pause Before Harm. Define the consequential action, evidence, authority, reversible Door, human owner, and receipt before use. Internal checks do not create certification or permission to deploy private packages.
RESEARCHER OR REVIEWER	Start at Project Shadow's release, status, TEVV, source, and receipts pages. Reproduce what can be reproduced, report adverse findings, distinguish synthetic mechanics from live-target evidence, and identify custody gaps.

What the current public release means

CURRENT	Public surfaces synchronized August 3, 2026. Evidence cutoffs stay item-specific, through August 2 where stated. Next review September 2; treat as stale after October 1 without a newer receipt.
OPEN	Corrections, independent reproduction, outside review, production validation, and external custody remain open work. Original code and documents now have a public license matrix; a license is permission, not validation.
NOT CLAIMED	No global green, independent validation, standards certification, guaranteed outcome, or authority granted by myth, model output, or built-in tests.
PRIVATE / PRE-LIVE	Recent harness, pressure, dispatcher, bridge, qualification, ratification, planning, and custody packages are preserved but not enacted, publicly distributed, or runtime-integrated. Their external license grant by exact hash is not publication or deployment authorization. The docket records 0 of 10 completed dispositions and 0 candidate bytes.

THE HUMAN FLOOR

No missing evidence becomes permission. No fluent output replaces accountable human judgment. Myth may route attention; it never authorizes action.

Creator-led, human-collaborative, and model-assisted. Project direction, final judgment, privacy decisions, correction, and publication remain human. Public release map: projectshadow.frylock117.chatgpt.site/release
